## Farm Information

Details used by the AI to build your farming plan

| STATE | DISTRICT |
| --- | --- |
| Maharashtra | Sambhajinagar |

| SOIL TYPE | WATER SOURCE |
| --- | --- |
| Red Soil | Drip Irrigation |

| BUDGET | CROP |
| --- | --- |
| 100000 | Rice |

**SEASON**

Kharif (June - October)

**SEED RECOMMENDATION**

{
  variety: 'Sahbhagi Dhan / Phule Samridhi (Aerobic Rice Varieties)',
  seedQuantity: '8 - 10 kg per Acre',
  estimatedCost: ' ¹1,200 -  ¹1,500 per Acre'
}

## Crop Timeline

Week-by-week schedule for your crop cycle

**WEEK 1**

Scheduled

### Land Preparation & Drip Installation

Deep ploughing, application of FYM and Zinc Sulphate, bed preparation, and laying out drip lateral lines.

Scheduled: 10 Aug 2026

**WEEK 2**

Scheduled

### Seed Treatment & Direct Sowing

Treat seeds with Carbendazim (2g/kg) and Azospirillum. Direct sow seeds on raised beds using seed drill or dibbling.

Scheduled: 17 Aug 2026

**WEEK 3**

Scheduled

### Germination & Weed Control

Run drip irrigation to maintain soil moisture at field capacity. Apply pre-emergence herbicide Pendimethalin within 48 hours of sowing.

Scheduled: 24 Aug 2026

**WEEK 4**

Scheduled

### Early Seedling Stage & First Fertigation

Inspect seedling emergence and start fertigation with water-soluble 19-19-19 NPK through drip venturi system.

Scheduled: 31 Aug 2026

**WEEK 5**

Scheduled

### Tillering Stage & Weeding

Perform manual weeding or post-emergence spray of Bispyribac-sodium. Continue regular drip irrigation and fertigation.

Scheduled: 07 Sept 2026

## Crop Timeline (continued)

**WEEK 6**
### Active Tillering & Micronutrient Spray
Scheduled

Foliar application of Ferrous Sulphate (0.5%) and Zinc Sulphate (0.5%) to treat iron chlorosis common in red soils.

Scheduled: 14 Sept 2026

**WEEK 7**
### Vegetative Growth & Pest Monitoring
Scheduled

Check for stem borer and leaf folder. Apply targeted organic or chemical pest control solutions as needed.

Scheduled: 21 Sept 2026

**WEEK 8**
### Panicle Initiation Stage
Scheduled

Increase potassium dosage via fertigation using 0-0-50 (SOP) to boost reproductive development and panicle health.

Scheduled: 28 Sept 2026

**WEEK 9**
### Booting Stage
Scheduled

Maintain optimum field soil moisture through drip. Apply preventive fungicide spray for blast disease.

Scheduled: 05 Oct 2026

**WEEK 10**
### Flowering Stage
Scheduled

Ensure continuous, moderate soil moisture via drip. Avoid pesticide sprays during peak flowering hours.

Scheduled: 12 Oct 2026

**WEEK 11**
### Milk Stage & Grain Formation
Scheduled

Fertigate with 13-0-45 (Potassium Nitrate) for bold grain filling and weight enhancement.

Scheduled: 19 Oct 2026

## Crop Timeline (continued)

**WEEK 12**
### Dough Stage
Scheduled

Monitor for grain sucking bugs or false smut. Regulate irrigation based on soil dryness.

Scheduled: 26 Oct 2026

**WEEK 13**
### Grain Maturation Stage
Scheduled

Reduce drip irrigation duration gradually as leaves turn golden yellow and grains harden.

Scheduled: 02 Nov 2026

**WEEK 14**
### Pre-Harvest Drip Stop
Scheduled

Completely stop drip irrigation 7-10 days prior to harvesting to allow ground to dry for machinery movement.

Scheduled: 09 Nov 2026

**WEEK 15**
### Harvesting & Threshing
Scheduled

Harvest crop using combine harvester when paddy grains reach around 18-20% moisture level.

Scheduled: 16 Nov 2026

**WEEK 16**
### Post-Harvest Drying & Lateral Storage
Scheduled

Sun-dry grains to 14% moisture content for storage or market sale. Roll up drip laterals for next cycle.

Scheduled: 23 Nov 2026

## Equipment

Machinery and tools recommended for this crop

### Tractor with Rotavator & Bed Maker

Land tillage, fine seedbed preparation, and raised bed creation

**Estimated Rent: ¹1,200 - ¹1,500 per hour**

### Direct Seeded Rice Drill / Dibbler

Uniform line sowing of rice seeds on raised beds

**Estimated Rent: ¹800 - ¹1,000 per acre**

### Battery Powered Knapsack Sprayer

Application of herbicides, insecticides, and micronutrients

**Estimated Rent: ¹200 per day**

### Combine Harvester

Efficient harvesting and threshing of paddy

**Estimated Rent: ¹2,200 - ¹2,500 per hour**

## Labour

Estimated workforce required across activities

| Activity | Workers | Est. Days |
| --- | --- | --- |
| Land Preparation, FYM Spreading & Drip Laying | 6 workers | 3 days |
| Sowing & Seed Treatment | 4 workers | 2 days |
| Weeding & Spray Applications | 4 workers | 4 days |
| Harvesting, Bagging & Drip Lateral Flushing | 8 workers | 2 days |

## Fertilizer Schedule

Recommended fertilizer application plan

| Stage | Fertilizer | Quantity | Time |
|---|---|---|---|
| Basal Application | Single Super Phosphate (SSP) + Zinc Sulphate | 100 kg SSP + 10 kg Zinc Sulphate per acre | During final bed preparation |
| Early Tillering (15-30 Days) | WSF 19-19-19 + Urea | 15 kg 19-19-19 + 20 kg Urea per acre (in split fertigations) | Weekly via drip venturi system |
| Panicle Initiation (40-60 Days) | WSF 12-61-0 + Urea | 10 kg 12-61-0 + 15 kg Urea per acre | Twice a week via fertigation |
| Flowering to Grain Filling (65-90 Days) | WSF 0-0-50 (SOP) + Potassium Nitrate (13-0-45) | 15 kg 0-0-50 + 10 kg 13-0-45 per acre | In split doses every 5 days via drip |

## Irrigation Schedule

Recommended watering plan for healthy crop growth

| Stage | Frequency | Water Requirement |
|---|---|---|
| Germination & Establishment (0-15 Days) | Daily | 1 - 1.5 hours daily to keep seedbed moist |
| Tillering to Panicle Initiation (16-60 Days) | Every alternate day | 2 hours per operational cycle at field capacity |
| Flowering & Grain Filling (61-100 Days) | Daily or Alternate Day | 2.5 - 3 hours per operational cycle |
| Maturity Stage (101-120 Days) | Every 3-4 days | 1 hour light irrigation, stop 10 days before harvest |

## Weather Report

Latest conditions used to plan your farming activities

**Condition: Sunny / Clear**

| TEMPERATURE | HUMIDITY | WIND SPEED | RAIN PROBABILITY |
| --- | --- | --- | --- |
| **28°C** | **65%** | **10 km/h** | **15%** |

### Weather Recommendation

Favorable weather conditions for current crop stage. Proceed with scheduled farming activities and maintain regular field observation.

## Precautions

Important safety and crop-care guidelines

- Ensure soil in red soil regions does not dry completely to avoid cracking and damage to lateral drip pipes.
- Flush drip lateral lines every 15 days with clean water to prevent emitter clogging due to organic residues or fertigation salts.
- Do not keep standing water like conventional paddy; maintain soil strictly at field capacity moisture.
- Wear protective masks and gloves when spraying herbicides and chemical insecticides.

## Tips

Best practices to improve yield and reduce costs

- Direct Seeded Rice (DSR) under drip saves up to 50% water and cuts total cultivation costs substantially compared to conventional flooding.
- Use screen and disc filters at the head control unit to maintain smooth drip fertigation flow across 5 acres.
- Apply Zinc and Iron micronutrients proactively, as red soils in Sambhajinagar district often induce micronutrient chlorosis in aerobic rice.

## Your Journey Continues

This report is just the beginning of your AI-powered farming plan
