TODAY'S TASK

No activity scheduled (10 Aug 2026)

AI RECOMMENDATION

No specific recommendation available today.

Farm Information

Details used by the AI to build your farming plan

STATE

Maharashtra

DISTRICT

Ahmednagar

SOIL TYPE

Red Soil

WATER SOURCE

Sprinkler

BUDGET

100000

CROP

Sugarcane

SEASON

Not available

SEED RECOMMENDATION

```
{
  variety: 'Co 86032 (Nira) / CoM 0265',
  seedQuantity: '6 Tonnes (approx. 25,000
two-eye budded setts for 2 acres)',
  estimatedCost: ' 22,000'
}
```

Crop Timeline

Week-by-week schedule for your crop cycle

WEEK Week 1

Land Preparation & Sett Selection

Deep plowing, FYM application, ridge formation, and procuring quality disease-free setts.

Scheduled: Not available

Upcoming

WEEK Week 2

Sett Treatment & Planting

Treat setts with Carbendazim (2g/L) and Azotobacter/PSB, plant in furrows, and apply light sprinkler irrigation.

Scheduled: Not available

Upcoming

WEEK Week 3-4

Germination & Gap Filling

Monitor seedling emergence, fill gaps where setts failed to sprout, run sprinkler cycles every 4-5 days.

Scheduled: Not available

Upcoming

WEEK Week 5-8

Tillering & Weed Management

Apply pre-emergence/post-emergence herbicides, first hand weeding, and top-dress initial nitrogen dose.

Scheduled: Not available

Upcoming

WEEK Week 9-14

Active Tillering Phase

Apply second dose of nitrogen and potash ferts; adjust sprinkler riser heights as crop height reaches 3-4 feet.

Scheduled: Not available

Upcoming

WEEK Week 15-20

Partial Earthing-up

Perform partial earthing-up to prevent tiller mortality and suppress weed growth in red soil beds.

Scheduled: Not available

Upcoming

Crop Timeline (continued)

WEEK Week 21-30

Upcoming

Grand Growth Phase & Final Earthing-up

Complete final earthing-up, apply booster nutrient dose, switch to rain-gun/high-riser sprinklers if required.

Scheduled: Not available

WEEK Week 31-40

Upcoming

Cane Elongation & Detrashing

Remove bottom dry leaves (detrashing) and use them as mulch between rows to conserve moisture.

Scheduled: Not available

WEEK Week 41-48

Upcoming

Maturation & Sugar Accumulation

Reduce irrigation frequency to encourage sugar accumulation in the cane stalks.

Scheduled: Not available

WEEK Week 49-52

Upcoming

Harvesting & Transportation

Stop irrigation 15 days before harvest; manually cut canes flush with ground level and send to local sugar mill.

Scheduled: Not available

Equipment

Machinery and tools recommended for this crop

Tractor with Disc Plow & Ridger

Land plowing, harrowing, and making furrows

Estimated Rent: ₦7,000

Sprinkler / Rain Gun System

Efficient water distribution across red soil terrain

Estimated Rent: ₦8,500

Knapsack Power Sprayer

Spraying herbicides, pesticides, and micronutrients

Estimated Rent: ₦1,500

Labour

Estimated workforce required across activities

Land Preparation & Ridging	WORKERS Not available	EST. DAYS Not available
Sett Cutting, Treatment & Planting	WORKERS Not available	EST. DAYS Not available
Weeding & Earthing-up	WORKERS Not available	EST. DAYS Not available
Fertilizer Application & Plant Protection	WORKERS Not available	EST. DAYS Not available
Harvesting & Sugarcane Loading	WORKERS Not available	EST. DAYS Not available

Fertilizer Schedule

Recommended fertilizer application plan

Stage	Fertilizer	Quantity	Time
Basal Application	Urea + Single Super Phosphate (SSP) + Muriate of Potash (MOP)	100 kg Urea + 300 kg SSP + 60 kg MOP (for 2 acres)	At the time of planting
First Top Dressing	Urea	100 kg Urea (for 2 acres)	45 Days After Planting
Second Top Dressing	Urea + Muriate of Potash (MOP)	100 kg Urea + 60 kg MOP (for 2 acres)	90 Days After Planting
Final Earthing-up Stage	Urea + Ferrous Sulphate + Zinc Sulphate	150 kg Urea + 10 kg FeSO4 + 10 kg ZnSO4 (for 2 acres)	120-130 Days After Planting

Irrigation Schedule

Recommended watering plan for healthy crop growth

Stage	Frequency	Water Requirement
Germination Phase (0-30 days)	Every 4-5 days	25-30 mm per sprinkler cycle
Tillering Phase (31-100 days)	Every 5-7 days	35-40 mm per sprinkler cycle
Grand Growth Phase (101-250 days)	Every 6-8 days	45-50 mm per cycle (Use high-riser pipes/ rain guns)
Maturity Phase (251-360 days)	Every 10-12 days	30 mm per cycle (Stop 15 days before harvest)

Weather Recommendation

No specific weather recommendation is available at this time.

Precautions

Important safety and crop-care guidelines

- Red soil has high permeability and low water retention; maintain frequent, light sprinkler cycles to avoid water stress.
- Ensure sprinkler riser height is raised or transition to rain guns as crop height exceeds 5-6 feet.
- Avoid water stagnation during early germination to prevent sett rot in furrows.
- Withhold water application completely 15-20 days before harvest to maximize sucrose concentration.

Tips

Best practices to improve yield and reduce costs

- Incorporate organic matter like pressmud or FYM in red soil to improve cation exchange capacity and water holding capacity.
- Detrash leaves at 5th and 7th month and place them between rows as mulch to reduce weed growth and retain soil moisture.
- Consider intercropping short-duration crops like chickpea or groundnut in the first 60 days to generate extra income.

Your Journey Continues

This report is just the beginning of your AI-powered farming plan
